

VirtualTech

VirtualTech is a comprehensive, cost-effective way to eliminate network downtime and hold carriers accountable for poor broadband performance. Our Expert Network Center uses innovative diagnostic tools to quickly isolate and correct issues remotely, dramatically reducing repair time and the need for costly on-site dispatches.

The BullsEye Way

Let us optimize your network for mission-critical applications like VoIP, UCaaS, SaaS, private networks, and more. Our process works like this:

ADVANCED DIAGNOSTIC TESTING

- ✓ Circuit review (packet loss, jitter, and upstream/downstream latency)
- ✓ VoIP mean opinion score (MOS)
- ✓ Firewall port assessment
- ✓ TCP/UDP stress test
- ✓ Customizable testing periods (Real-time, 4/6/8/24-Hour)

The BullsEye Difference

With on-demand remote diagnostics, VirtualTech revolutionizes head-end network support for remote locations:

- Reduced need for costly on-site dispatches with faster, less expensive, and accurate remote remediation that doesn't disrupt business operations
- Isolated root cases for intermittent and chronic network issues
- Non-invasive troubleshooting and VoIP readiness testing

TWO OPTIONS

- ➔ VirtualTech is available to BullsEye's VoIP and broadband customers as an add-on service.
- ➔ Companies with VoIP and/or broadband services from another carrier can select VirtualTech as a stand-alone service.
